

**SEWERGY**

MAPPING SEWER ENERGY.

Greet CE 18.02.2026

Pal Kiss Founder

# Tackling Climate Change in Cities

- ↗ Buildings are the main emitters of CO<sub>2</sub>
- ↗ Electrified heating → low CO<sub>2</sub> emissions
- ↗ Most efficient electrification → Heat Pumps
- ↗ Most efficient Heat Pumps → water to water
- ↗ They need water heat sources
- ↗ Under our feet waste water is available everywhere in cities
- ↗ **Where exactly? How many kW's?**

Unused Energy **Potential**: 1 MW/ 10.000 PE

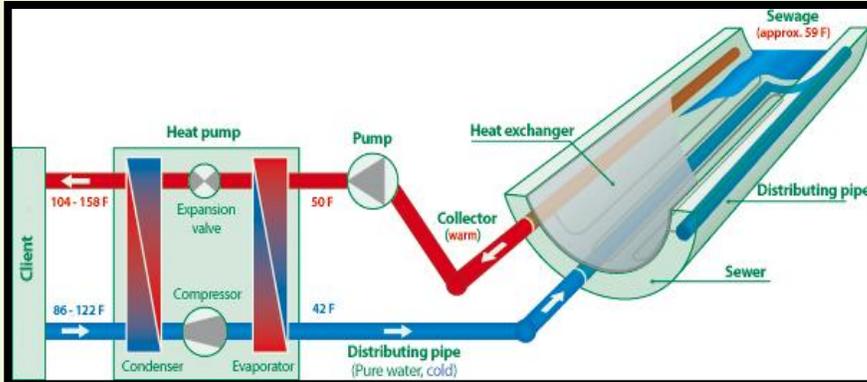

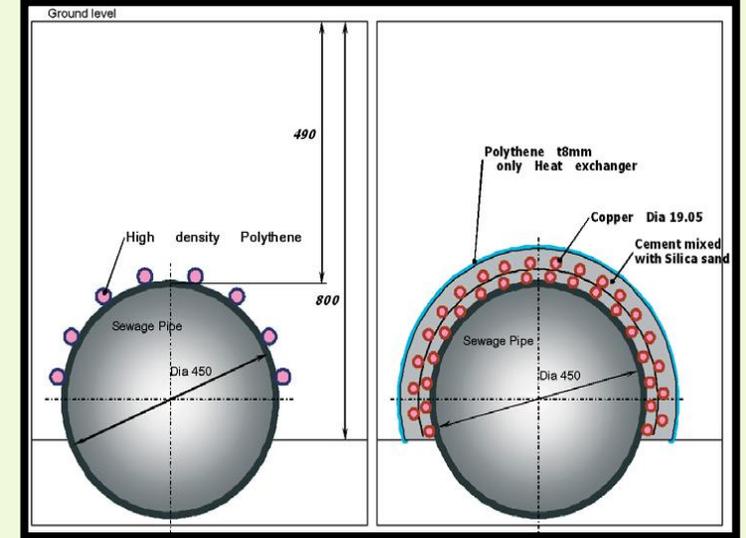

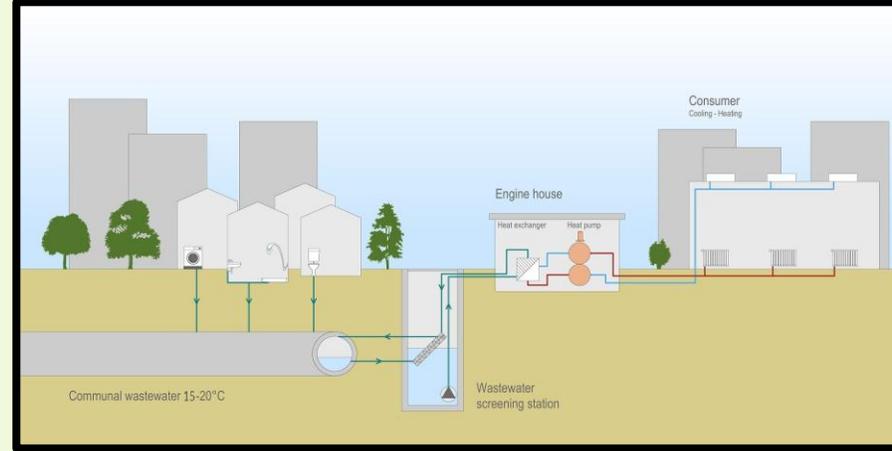

Project ROI: 5-15 years, Investment cost: 1-2 millions EUR/MW

**SEWERGY**

# Many technologies are available for waste water heat

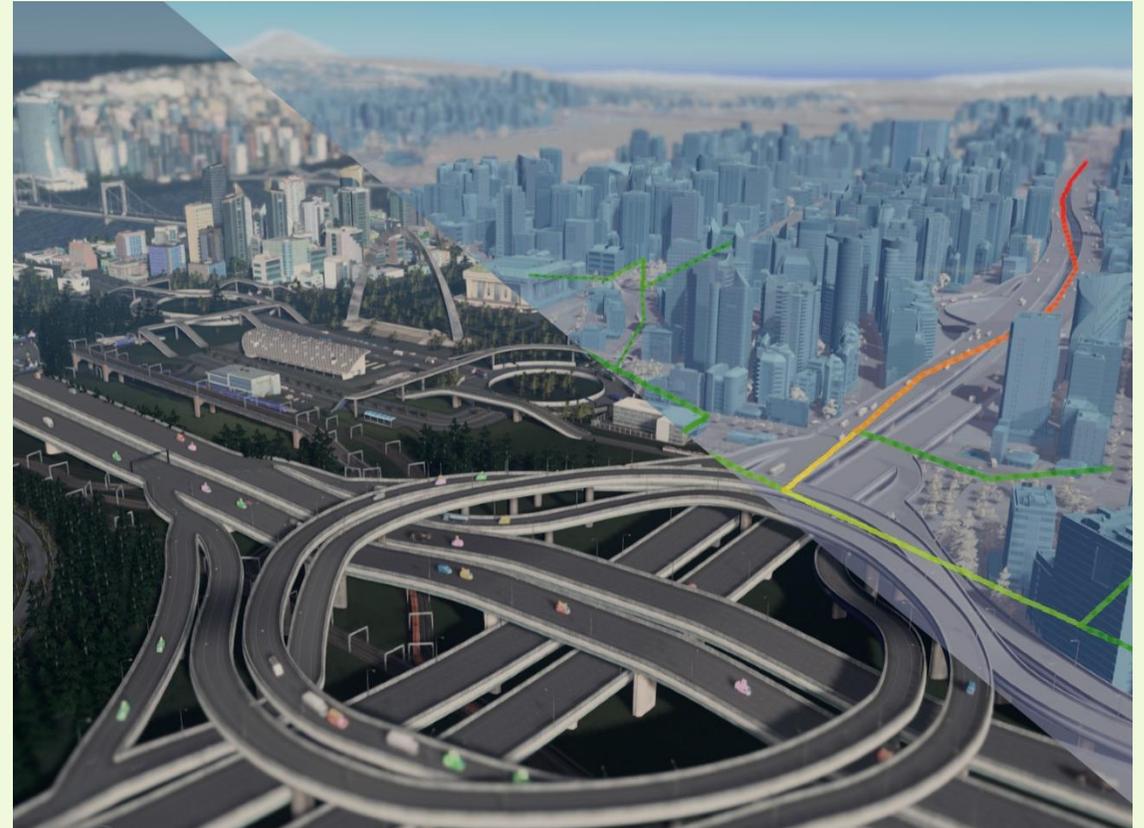

SEWERGY

# The SEWERGY Solution

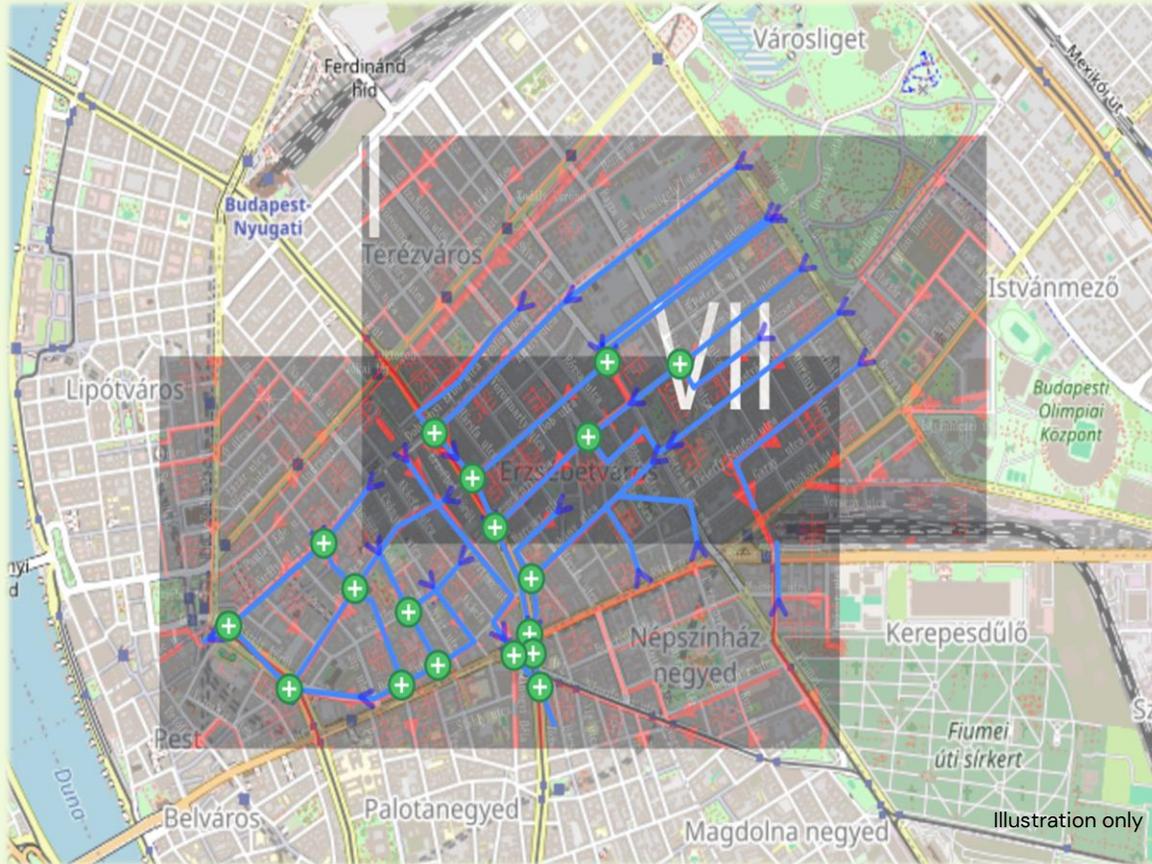

- Backed by **15+ years of experience** in sewage heat utilization
- Over **90% cost savings** compared to traditional mapping with measurements
- Up to **10x faster** than measurement-based mapping

SEWERGY

# SEWERGY SOFTWARE STEPS

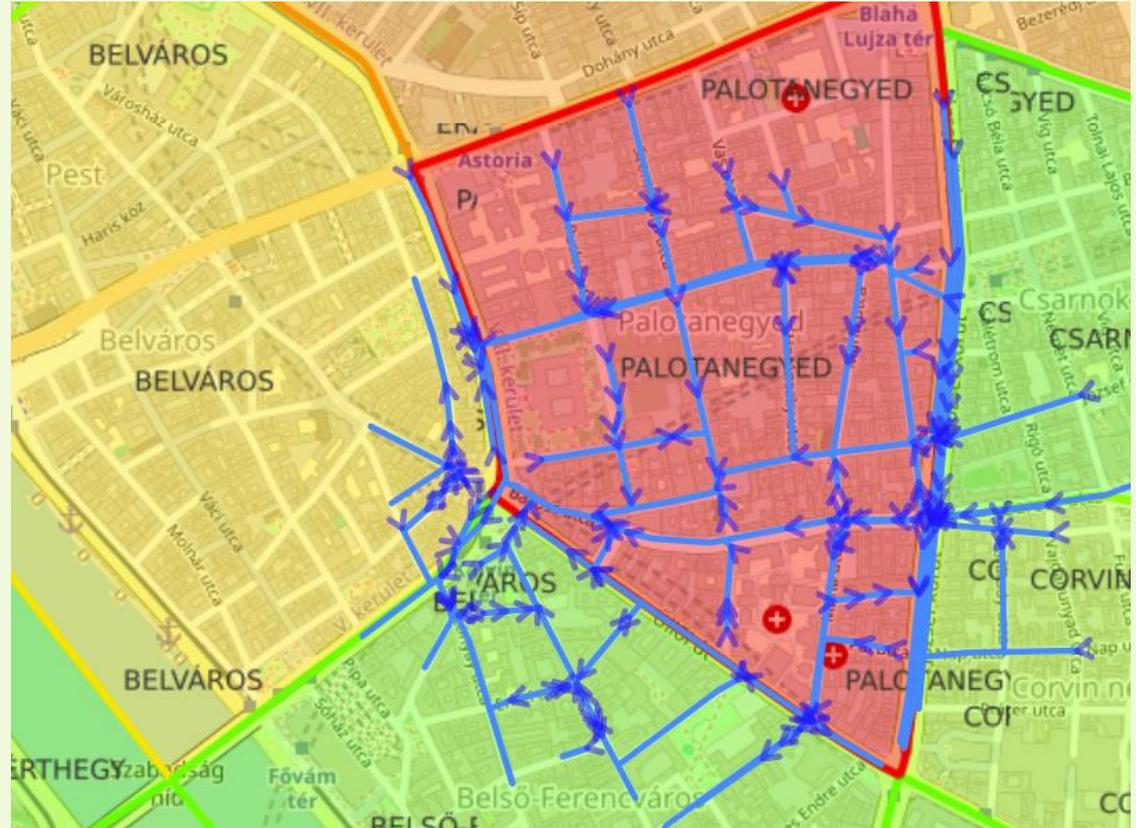

- 1. AI population data collection**
- 2. Automated upload of the sewage network into city map**
- 3. Data calibration**  
(WWTP, Pumping stations, etc.)
- 4. Heatmap generation**

SEWERGY

# AI population Data Collection

# WHO IS IT FOR?

- **Municipalities**
  - Green strategy, EU regulation\* for renewable heat mapping
- **Water utilities**
  - To generate revenue from their sewage network
- **District Heating Companies**
  - To generate revenue from a renewable heat source, efficient DH
- **Investors & Real estate developers**
  - For sustainable and green investments complying with ESG rules

- Built **specially** for sewage heat
- **Quick & visible** tool for decision makers
- **Evolving** accuracy through further inputs

\*DIRECTIVE (EU) 2023/1791 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 13 September 2023, Article 25, 6.(a)
