On Innovation and Strategy :)

©marketoonist.com

In talking about innovation, it's easy to get lost in the "strategizing" and lose sight of the **actual customer need**. Strategy is followed by its execution, which translate strategic initiatives **into action** and get all involved actors to **embrace change**.

About our “actual customer”

BGA - blue growth areas

BLUE TECHNOLOGIES

FIELDS OF ACTIVITY

BLUE SOLUTIONS

- Marine technology
- Clean technology (BG related)
- ICT technology (BG related)

- Marine living resources (established)
- Waterborne* transport and port activities (established)
- Bioeconomy and Biotechnology (emerging)
- Infrastructure and marine works (submarine cables, robotics) (emerging)

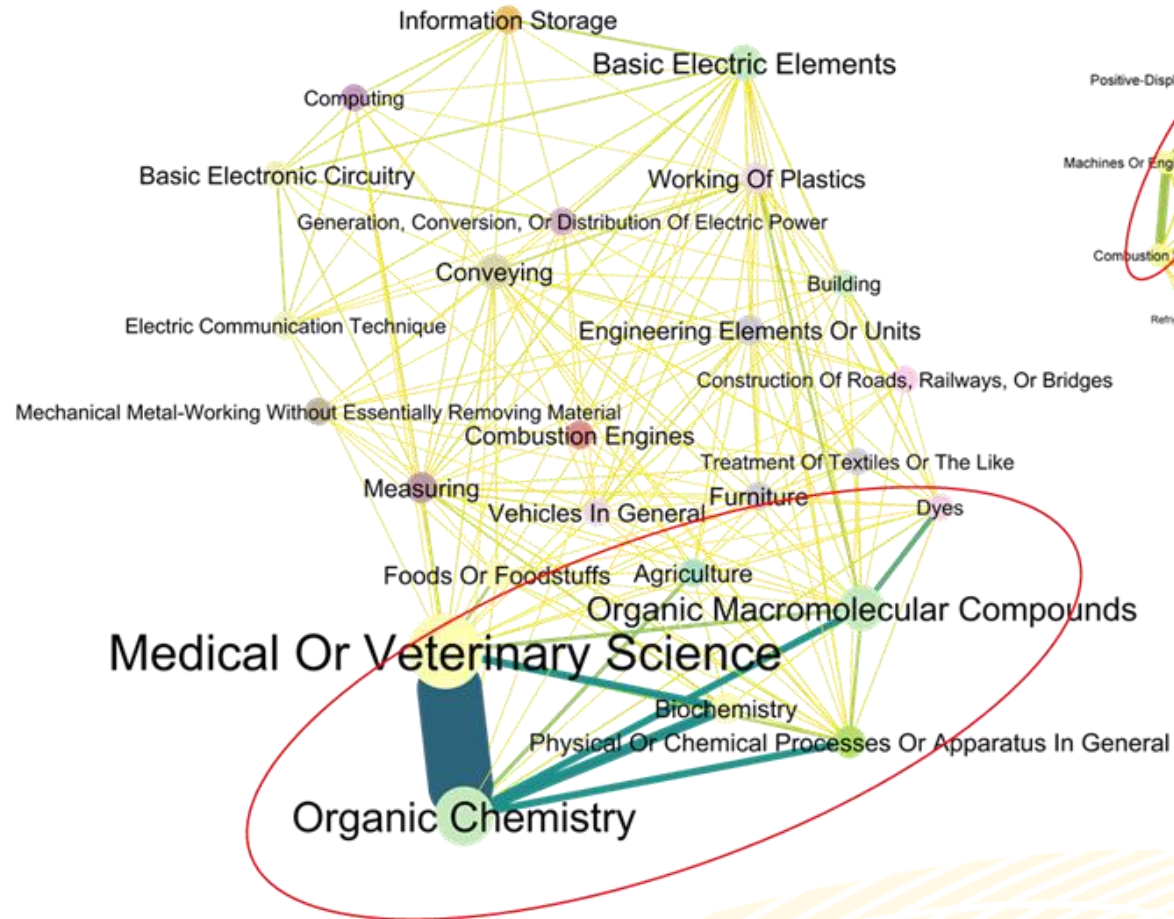

- Maritime surveillance
- Public services and governance
- Management of marine ecosystem services

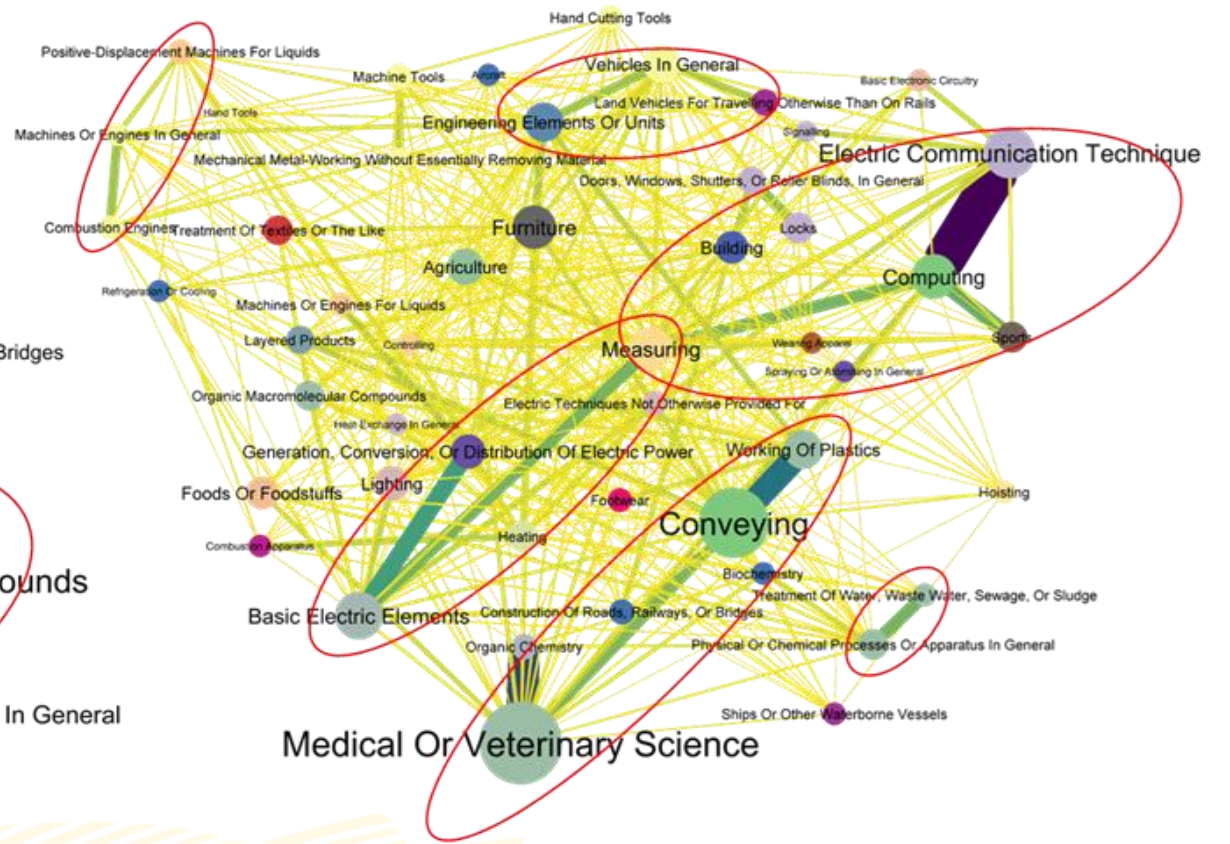

* Regarding non-coastal members of ADRION this sector could be broaden to Waterborne transport

Recap 1990-2020

1990 - 1995

2016 - 2020

Total of **2013 participants** have entered the survey following provided links from the respective invitation letters received from implementing and supporting partners.

228 valid surveys were collected across all 9 regions/countries giving the **response rate of 11%**.

Trends in the field of Blue Growth that will have the greatest impact on R&D&I activities in the following years collected from around 60 non-industry entities **are very diverse** (depending on their domains).

Green transition - Digital transformation - Climate change - Blue bioeconomy & biotechnology - Fisheries & Aquaculture - Marine renewable energy - Shipbuilding and ship repair - Infrastructure and maritime works - Maritime surveillance - Public services and governance - Management of ecosystem services - Circular economy - Blue innovations - Waterborne transport and port activities - Social innovations - Skills and Education - Networking of Blue Economy stakeholders - Market trends - Coastal tourism

Technology foresight, in the framework of **BLUEAIR** toolbox, aims at supporting policymakers in their better-informed decision processes which consider different scenarios and outcomes while exploring alternative futures in a structured way.

1. **Robotics** - focus on *autonomous ships and vessels, port and near-shore surveillance and maintenance, offshore inspection and maintenance*
2. **Alternative fuels** - focus on *methanol, hydrogen and ammonia*
3. **ICT technologies** - focus on *IoT security, predictive maintenance and 5G*
4. **Aquaculture** - focus on *single-cell protein, insect protein, supply chain management*
5. **Waterborne transport** - focus on *low-carbon marine vessels, multimodal transport, waterborne traffic management*

Insights and results of **cross-fertilization workshops** addressing the identified ADRION's common **challenges and opportunities** related to **blue innovation** are channeled into five **recommendations**

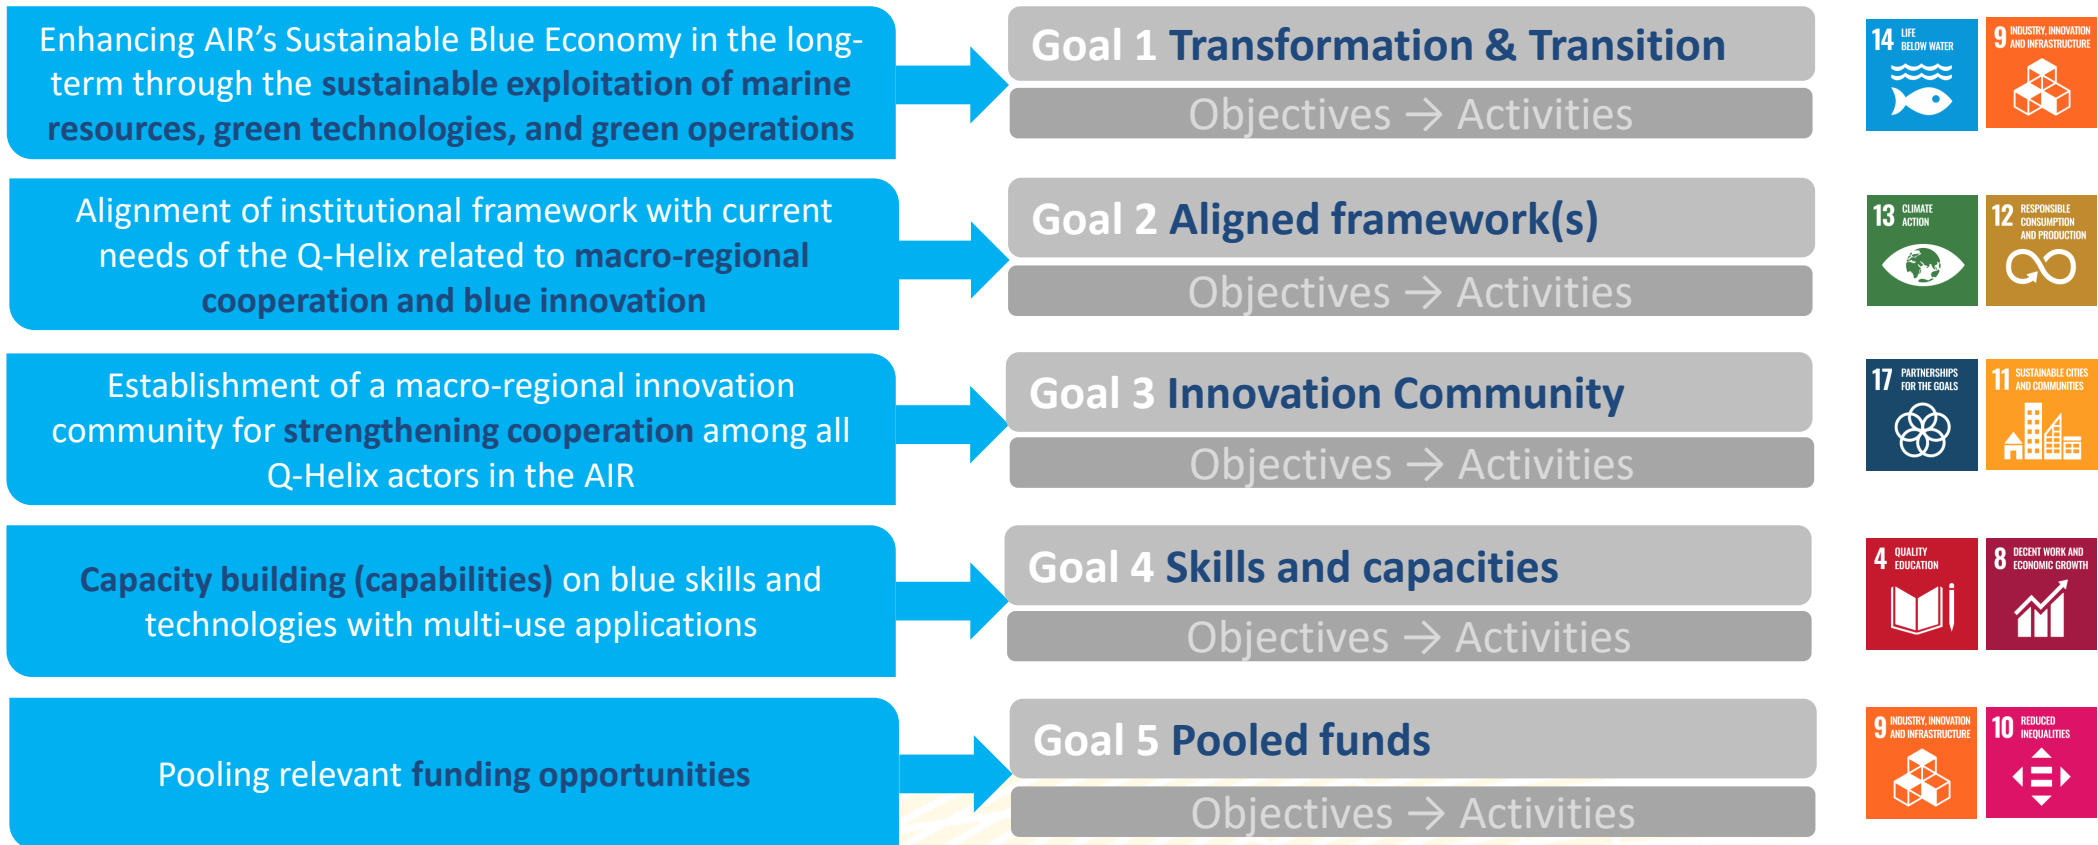

Innovation Strategy structure and Goals

RECOMMENDATIONS

LONG TERM GOALS

SDGs

Action plan

Goal 1: Transformation & Transition

Long-term goal 1 “Enhancing AIR’s Sustainable Blue Economy in the long-term through the sustainable exploitation of marine resources, green technologies, and green operations” encompasses the following short-term objectives:

1. *Exploitation of the available **marine resources, blue technologies and clean operations** for sustaining and enhancing in the long-term the competitive advantages of the Adriatic – Ionian Region’s sustainable blue economy*
2. *Exploitation of **digital solutions** (i.e., Artificial Intelligence, Internet of Things, etc.) for conservation of the marine environment and enhancing blue economy sectors’ sustainability.*

Goal 2: Aligned framework(s)

Long-term goal 2 “Alignment of institutional framework with current needs of the Q-Helix related to macro-regional cooperation and blue innovation” entails the following short-term objectives:

- 1. Development of an open **cross-border monitoring system** for the investigation and identification of climate change impacts on marine and coastal areas, enabling the sharing of and access to knowledge, information, data, and technologies*
- 2. Adoption of “**circular**” economy into national and macro-regional action plans and policy/strategy frameworks of the blue economy*
- 3. Development of common guidelines and tools for **adaptation to climate change** in blue economy*

Goal 3: Innovation Community (AIIIC)

Long-term goal 3 “Establishment of a macro-regional innovation community for strengthening cooperation among all Q-Helix actors in the AIR” is consisted of the following short-term objectives:

1. *Shared infrastructure on land or in maritime ports through **partnerships between cross-cutting blue sectors** for increasing efficiency through reduced costs and/or environmental impacts*
2. *Setting up **transnational cooperations between S3 regions/countries** on common S3 priorities in blue economy for finding joint solutions that can address macro-regional challenges and opportunities*
3. *Setting up transnational “**Blue Economy Innovation Communities**”.*

17 PARTNERSHIPS
FOR THE GOALS

11 SUSTAINABLE CITIES
AND COMMUNITIES

Goal 4: Built skills and capacities

Long-term goal 4 “Capacity building on blue skills and technologies with multi-use applications” entails the following short-term objectives:

1. *Skills and technologies with **multi-use applications** for sustainable blue economy value chains exploiting the potential for applying new methods (e.g. big data applications), land-sea technology and economic “cross-overs” and renewing the skills base of the blue economy*
2. *Designation of **innovation experts** for consulting on innovation and support its implementation in blue economy sectors*
3. *Establishment of a **blue career network** communities’ for connecting relevant centers*
4. ***Integration** of modern blue technologies to “traditional” blue economy sectors*
5. *Building capacities of all Q-Helix actors for developing **strong international collaboration and value chain links** for strengthening Blue Growth and enhancing sustainable Blue Economy at the macro-regional level.*

Goal 5: Pooled funds

Long-term goal 5 “Pooling relevant funding opportunities” consists of the following short-term **objectives**:

1. *Current and future **financing opportunities** for sustainable blue projects*
2. *Pooling funding from **regional programming instruments** (hub and/or virtual platform)*

Action plan (extract as example)

LONG-TERM GOAL 1		ENHANCING AIR'S SUSTAINABLE BLUE ECONOMY IN THE LONG-TERM THROUGH THE SUSTAINABLE EXPLOITATION OF MARINE RESOURCES, GREEN TECHNOLOGIES, AND GREEN OPERATIONS			
Expected impact - proposal of potential indicator for monitoring (on the regional level)					
Enhanced AIR's Sustainable Blue Economy in the long-term through the sustainable exploitation of marine resources, green technologies, and green operations – <i>number of innovative solutions developed for sustainable exploitation of marine resources, green technologies, and green operations</i>					
ROADMAP TO ACHIEVING THE LONG-TERM GOAL (solutions and key steps)					
Short-term objectives	Initiatives (activities)	Expected result - proposal of potential indicator for monitoring (on the regional level)	Responsibility	Inputs	Due date
Exploitation of the available marine resources, blue technologies and clean operations for sustaining and enhancing in the long-term the competitive advantages of the Adriatic – Ionian Region's sustainable blue economy	Development and implementation of collaborative R&D&I projects for exploitation of available marine resources, blue technologies and clean operations	Collaborative R&D&I projects for exploitation of the available marine resources, blue technologies and clean operations (<i>number</i>)	All partners	<ul style="list-style-type: none"> National, regional, and EU current and future funding opportunities Q-Helix collaboration Human, material, operative, financial capacities and resources Competences and know-how 	2027 (recurring: frequency biennially, 2023 – 2024; 2025 – 2026)
