

# EUA Contribution to SSH in European Research and Innovation Policy

**Dr Bregt Saenen**  
Policy and Project Officer |  
Research and Innovation

6 December 2018

# Introducing EUA

- **Representative organisation** of universities and national rectors' conferences in 48 European countries
- Ensures that the **independent voice of European universities** is heard wherever decisions are being taken that will impact their activities
- Provides a unique expertise in higher education and research as well as a forum for exchange of ideas and good practice among universities

More information:

<https://eua.eu/>

# Headline message

**EUA supports the full integration of Social Sciences and Humanities (SSH) disciplines in Horizon 2020 and its successor Horizon Europe**

- SSH expertise is crucial in addressing societal challenges involving energy, climate change, poverty, ageing societies, migration or extremism
- A better inclusion of these disciplines will expand the understanding of impact and innovation beyond simplistic linear models
- Innovative, multidisciplinary approaches should also increase exchange between different disciplines within Science, Technology, Engineering and Mathematics (STEM) and within SSH

## State of play

### SSH integration in Horizon 2020 is unbalanced

- The **quantitative** integration of SSH is satisfactory, but has decreased since 2014-15
- The **quality** of SSH integration is highly uneven, depending on the Societal Challenge or Leadership in Enabling and Industrial Technologies part

European Commission (2018). [Integration of social sciences and humanities in Horizon 2020.](#)

## **SSH project partners often take on an auxiliary role in research projects**

*“All disciplines in multidisciplinary (Horizon 2020) collaborative projects have the feeling that they are only the “supporting” discipline to each other and not the leading discipline.” – Institution from the Netherlands*

*“SSH is often reduced to a practical matter of gaining public support or disseminating results. Relevant SSH perspectives should also be allowed to drive and define the fundamental research agenda of the societal challenges.”*  
– Institution from Denmark

# EUA joint positions

**EUA and thirteen other university networks advocate to strengthen SSH integration as a cross-cutting priority in Horizon Europe**

EUA et al. (2018). [Universities united for the best Horizon Europe](#) and joint proposed amendments.

**Universities united for the best Horizon Europe**

## EUA policy positions

**EUA consistently includes the full integration of SSH in its proposals for and analyses of Horizon Europe**

From Vision to Action:  
What **EUA** proposes for  
the **Next Framework  
Programme for Research  
and Innovation (FP9)**

**Horizon Europe:**  
EUA analysis of the  
European Commission  
proposal

# Practice what you preach

## EUA Energy & Environment Platform

*“Universities are uniquely positioned to make a significant contribution [to sustainable energy] because they can **combine expertise from different research and education disciplines** [...].”*

4. (Renewable) Technologies - Chemical			
Topics (for courses)	Understanding, Background Knowledge, Comprehension, General Appreciation of ...	Design and Implementation / Deeper (Master level) Appreciation of ...	Employment Skills
Technical	The various bio-refinery systems	Regional context to adapt bio-refinery systems to spatial context	Integrate resource-technology-demand systems on a regional basis
	The properties and limitations of bio/renewable resources	The environmental/climate impact on bio-fuel production (e.g. crop production/residues)	Appreciate the principles of the circular economy by being able to connect biological/chemical 'residues' to generation
Social	The social impact of bio value-chains, e.g. eliminate impact on food production	Value chain (re)balancing to benefit all actors	Grasp and being able to apply the principles of the circular economy
	The role of the various actors in bio value-chains	Different opportunities for improving the circular economy within society	
Economical	Bio-resource markets	Possibilities for optimising resource use on a regional basis	Establish innovative business concepts for bio/renewable resource use
	The impacts of a purely economically driven bio-resources movement		
Political	Regional governance	Legislation proposals to improve the use of local resources	Interact with regional, national, global actors to optimise local resource use
	The interaction of regional, national and global governance regarding bio-resources		

# EUA recommends

- Provide **clearer outlines** of the general components of multidisciplinarity in Horizon Europe projects and describe requirements for multidisciplinary research in a user-friendly way
- Promote and support research based on **bottom-up initiatives and open-themed calls** for smaller, focused, multidisciplinary consortia
- Foster “**disciplinary mobility**” in the programmes
- A **more sophisticated set of indicators** aimed at capturing the innovation possibilities and potential of research should be developed and become part of the impact analysis

Source:

EUA (2017). [From Vision to Action: What EUA proposes](#).

## SSH is not an auxiliary add on

- Render SSH participation mainstream in Horizon Europe to ensure that **SSH experts are involved in all the phases** of the process, including problem formulation, work programme drafting and topic design
- Develop programmes with a focus on challenges and opportunities bringing together multidisciplinary teams within and between **SSH and STEM as equal partners** that contribute to a sustainable future

Source:

EUA (2017). [From Vision to Action: What EUA proposes.](#)

“[Horizon 2020] pays tribute to the findings that, although research in technologies can provide technical solutions to major challenges, **Social Sciences and Humanities (SSH) can help making them accepted, understood and appropriated by the general public.**”

Source:

European Commission (2018). [Integration of social sciences and humanities in Horizon 2020.](#)

## Focus on proposal evaluation

- Review the composition of present **evaluation panels** and include reviewers with multidisciplinary expertise
- Consequently, **new approaches** should be developed to evaluate multidisciplinary projects and to capture their scientific and societal impact
