Hydrogen produced in circular
economy :
a bio economy application to the service
of people and territories

Jean Foyer

Our Project

To invent and develop **the bio economy champion** who will produce and sell, with **circular economy model**, one clean, abundant and cheap energy: **hydrogen**.

Circular economy

Production model that forecasts the entire life cycle of a product to limit resource requirements and its ecological impact.

Bio economy

Economic activity, which may involve the circular economy, based on the virtuous use of biomass.
